Reflection of Macro-Assignment

In this assignment I clearly explained the economic theory process involved. Moreover, in this artifact I show how macro-economic theories can be applied to real life scenarios. I did this by moving step by step through the logic involved in this process. I then took these logical steps and put them into concise and accurate written form. While I am writing this reflection after a considerable passing of time, I believe what that one thing that I learned from doing this assignment is that being clear is essential in any economic and non-economic writing. This is especially true when there is a considerable amount of theoretical themes involved.
